PI Extraction Guidelines

This document defines the default extraction style and workflow for processing award agreements into meeting-ready PI Checklists. It ensures consistency across all project chats.

Default Extraction Style

• Output is structured to match the PI Checklist form order exactly. • Information is presented in plain language first, with citations provided at the end of each item. • The extraction is designed to be digestible for the PI and Post Award team, serving as the live meeting document.

Source Tags

Each detail is labeled with a source tag to indicate its origin: • [Doc] – Directly stated in the award agreement. • [Interp] – Inferred from multiple parts of the agreement. • [Absent] – Not in the agreement; value derived from omission. • [Internal] – Filled from CSUCI records or post-award sources.

Follow-Up Icons

Icons are used to highlight follow-up needs: • ■ Information typically sourced from other internal docs or finalized after the meeting. • ■ Mentioned but unclear/incomplete; confirm with sponsor or PI. • ■ Missing & time-sensitive; resolve before or during the setup meeting.

Command Trigger

Use the shorthand phrase: “Nova, run the PI extraction.” This triggers a full extraction in the default style. Alternate phrasing like “PI extraction” will also be recognized.

Workflow Notes

• Extractions are meeting-ready and can be sent directly to the PI and Post Award team. • Plain language is prioritized for clarity; citations are included for quick verification. • A Follow-Up section at the bottom isolates ■ and ■ items as discussion points. • The Common Clauses Library will be updated behind the scenes with clause text and locations for future reference.
